

This module provides a more effective way to handle procurement and supply of the material, equipment, services, and other resources needed across all company business unit locations. It makes it possible and easy to requisition any material, equipment, service, or resource from any place, and still apply the approval workflows and controls of the purchasing cycle by each business unit location. BePC module is built to reduce resource acquisition costs, and make all the company business units more efficient by reducing processing costs and provide information for critical decision-making.

## Features:

- Fully integrated with the BePR Purchasing Module, to check the available quantities of any requested procured material, and to generate all the approved Purchase Orders.
- Multi companies, multiple business unit locations with multiple users by location.
- Includes a very powerful authorization and approval scheme.
- Multi-user, English interface with English / Arabic menus, and Arabic fly-over help & Uses the latest technological methods for user interfaces.
- Powerful search techniques using user-defined filters.
- Simple Requisition Creation Process.
  - It maintains all needed to procure information and prices records for the material, equipment, services, and other resources by a supplier, with the possibility to create a different material, equipment, services, and requisition type by each business unit location, and to define what is the visible material, and services groups for requisitions by each business unit location and it transforms your internal processes with the straightforward requisition features.
- Simplify RFQs and Comparison Sheets Creation.
  - Completed, approved requisitions are easily converted to RFQs and comparison sheets. It allows procurement officers to easily view the completed and authorized requisitions of those related to their preset business unit locations to proceed with RFQs and comparison sheet creation.
- Give your team a very powerful approval pilot form with super visibility into all of the pending MRs, comparison sheets, full information including attachments, approval status tracking, and budget control on the procured resources by a preset schedule to deliver resources quantities and values.
- Budget Checking and Requisition Schedule Control.
  - Tracking and controlling the budget through each procurement phase, and tracking all the scheduled and not requested yet resources. The BePC module handles the task by allowing designated users the right to view budget information for certain budget codes and rolled-up segments, so budget-to-actual comparisons can be made on requested purchases and so that approvers can determine if requisitions are within existing budgets value and quantity, with the possibility to stop the over budget MRs or sending warning messages by SMS or emails to the related managers.
- Simplify Purchase Order Creation.
  - Completed, approved comparison sheets are easily converted to purchase orders using generate purchase orders feature. This feature allows purchasing managers to easily view a summary of completed and authorized comparison sheets and can then proceed with purchase order creation.

*Runs under Windows®.  
Works on LAN, RDP,  
CITRIX®.  
Could be hosted on  
premises or on cloud.*
