

It is a salon, spa and fitness business management software solution designed for SMEs that feature appointment bookings (It offers slot booking, calendar appointment histories, contact details and future bookings, and activity dashboard allows users to keep track of the daily activities, such as booking dates, notifications and actions), point-of-sale (which helps users to record all their sales in a single place and maintain a cash register, and keep records of their customer service histories and generate customizable reports to track business performance, and to manage POS transactions, invoicing, receipts and taxes), service management and reporting.

If integrated with the BeSS (Send SMS Management) Module, users can create customizable messages to showcase upcoming events, confirmation of bookings, and special offers and connect with their customers through SMS messages. This feature allows users to reduce no-shows and manage appointments.

If integrated with the BeGL (General Accounting) Module, the BeRP (Receivables and Payables) Module, and the BeBI (Financial Reports Generator) Module, it will generate all the needed journal vouchers and update the GL automatically to give the client full accounting services to manage the business.

This module caters to the needs of hair and beauty salons, massage centers, spas and saunas, gyms and trainers industry segments.

Features:
